

Startup and Taxiing on deck

No call is required for starting up. As soon as you are able to, go on to tower frequency and your flight frequency and do a radio check by sayin the following:

- [modex number] radio check on [frequency]. if you are checking in on tower.
- [full flight name] radio check on [frequency]. if you are on any other frequency

If you get no response while you know other people are on the frequency, check your systems and repeat your radio check until you have radio contact.

As soon as you are fully done with startup and ready to taxi, tell your flight lead you are green jet and standby.

As flight lead its your responsibility to chose when to start taxiing your flight. Here is a checklist of all that is required before taxiing:

- All members are green jet.
- No other flights are currently taxiing.
- No landings are taking place.
